

School District of Pickens County

Building success beyond the classroom

SC Standards: Science

Eighth Grade

Unit: Scientific Inquiry

- Science-8-1.1 Design a controlled scientific investigation.
- Science-8-1.2 Recognize the importance of a systematic process for safely and accurately conducting investigations.
- Science-8-1.3 Construct explanations and conclusions from interpretations of data obtained during a controlled scientific investigation.
- Science-8-1.4 Generate questions for further study on the basis of prior investigations.
- Science-8-1.5 Explain the importance of and requirements for replication of scientific investigations.
- Science-8-1.6 Use appropriate tools and instruments (including convex lenses, plane mirrors, color filters, prisms, and slinky springs) safely and accurately when conducting a controlled scientific investigation.
- Science-8-1.7 Use appropriate safety procedures when conducting investigations.

Unit: Astronomy

- Science-8-4.1 Summarize the characteristics and movements of objects in the solar system (including planets, moons, asteroids, comets, and meteors).
- Science-8-4.1 Compare the purposes of the tools and the technology that scientists use to study space (including various types of telescopes, satellites, space probes, and spectrosopes).
- Science-8-4.2 Summarize the characteristics of the surface features of the Sun: photosphere, corona, sunspots, prominences, and solar flares.
- Science-8-4.3 Explain how the surface features of the Sun may affect Earth.
- Science-8-4.4 Explain the motions of Earth and the Moon and the effects of these motions as they orbit the Sun (including day, year, phases of the Moon, eclipses, and tides).
- Science-8-4.5 Explain how the tilt of Earth's axis affects the length of the day and the amount of heating on Earth's surface, thus causing the seasons of the year.
- Science-8-4.6 Explain how gravitational forces are influenced by mass and distance.
- Science-8-4.7 Explain the effects of gravity on tides and planetary orbits.
- Science-8-4.8 Explain the difference between mass and weight by using the concept of gravitational force.
- Science-8-4.9 Recall the Sun's position in the universe, the shapes and composition of galaxies, and the distance measurement unit (light year) needed to identify star and galaxy locations.

School District of Pickens County

Building success beyond the classroom

SC Standards: Science

Eighth Grade

Unit: Earth's Structure and Processes

- Science-8-3.1 Summarize the three layers of Earth-crust, mantle, and core-on the basis of relative position, density, and composition.
- Science-8-3.2 Explain how scientists use seismic waves-primary, secondary, and surface waves-and Earth's magnetic fields to determine the internal structure of Earth.
- Science-8-3.3 Infer an earthquake's epicenter from seismographic data.
- Science-8-3.4 Explain how igneous, metamorphic, and sedimentary rocks are interrelated in the rock cycle.
- Science-8-3.5 Summarize the importance of minerals, ores, and fossil fuels as Earth resources on the basis of their physical and chemical properties.
- Science-8-3.6 Explain how the theory of plate tectonics accounts for the motion of the lithospheric plates, the geologic activities at the plate boundaries, and the changes in landform areas over geologic time.
- Science-8-3.7 Illustrate the creation and changing of landforms that have occurred through geologic processes (including volcanic eruptions and mountain-building forces).
- Science-8-3.8 Explain how earthquakes result from forces inside Earth.

Unit: Earth's Biological History

- Science-8-2.1 Explain how biological adaptations of populations enhance their survival in a particular environment.
- Science-8-2.2 Summarize how scientists study Earth's past environment and diverse life-forms by examining different types of fossils (including molds, casts, petrified fossils,preserved and carbonized remains of plants and animals, and trace fossils.)
- Science-8-2.3 Explain how Earth's history has been influenced by catastrophes (including the impact of an asteroid or comet, climatic changes, and volcanic activity) that have affected the conditions on Earth and the diversity of its life-forms.
- Science-8-2.4 Recognize the relationship among the units-era, epoch, and period-into which the geologic time scale is divided.
- Science-8-2.5 Illustrate the vast diversity of life that has been present on Earth over time by using the geologic time scale.
- Science-8-2.6 Infer the relative age of rocks and fossils from index fossils and the ordering of the rock layers.
- Science-8-2.7 Summarize the factors, both natural and man-made, that can contribute to the extinction of a species.

Unit: Waves

- Science-8-6.1 Recall that waves transmit energy but not matter.
